

ANNUAL MEETING SPECIAL INTEREST GROUP BIOGEOGRAPHY

07. - 08. May 2020

Institute of Geography, Universität Hamburg Venue: Staats- und Universitätsbibliothek

The spatial reference is the basis of all biogeographical questions. Independent of the research organism, environment, scale and time, the geographical location is fundamental for questions in biogeography.

To investigate distributional patterns and underlying factors responsible for variations in distribution, Geographic Information Systems and statistical programmes have become indispensable tools to process the collected data. However, commercial products are expensive, inconvenient or impossible to change and improve, and access is mostly only possible within well-funded institutions.

Therefore, we offer 2 workshops on common freeware: "Introduction to SAGA GIS" by

Dr. Olaf Conrad (Institute of Geography, Universität Hamburg) and "Ecological Geocomputing with R" by Dr. Jannes Münchow (Institute of Geography Universität Jena).

The theme "Think spatial and do biogeography" of the upcoming annual meeting of the Special Interest Group Biogeography 2020 will be enhanced by the keynote lecture given by Prof. Dr. Carsten Dormann (Department of Biometry and Environmental System Analysis, Universität Freiburg).

The registration is open until April 1st 2020. Please register under https://www.conferences.uni-hamburg.de/e/akbiogeo2020
Student rate 35 €
Regular rate 45€

There is no additional charge for attendance at the workshops.
