The Digital Causality Lab - New Ways to Teach Causality

The **Digital Causality Lab (DCL)** is an innovative teaching project at the University of Hamburg which focuses on the topics Causal Inference and Data Literacy. It is one of the teaching projects that have been funded in the DDLitLab Project (Stiftung Innovation in der Hochschullehre). In the Digital Causality Lab, we use interactive apps to complement a new MOOC on causal inference, which is open to students from all fields (studium generale). Participants acquire and apply data literacy skills in the context of causal data products (case studies).
